

Purchase Agent by JobOps

Purchase Agent intelligently analyzes your supply and demand to help you buy the right products at the right time.

The Right Quantity At The Right Time

A lean operation has the right materials available to fill the current demand—without stocking costly excess inventory. This is an ideal that can be hard to reach without the right tools.

Purchase Agent by JobOps helps you manage the purchasing process to avoid materials shortages and ensure the right materials arrive just in time.

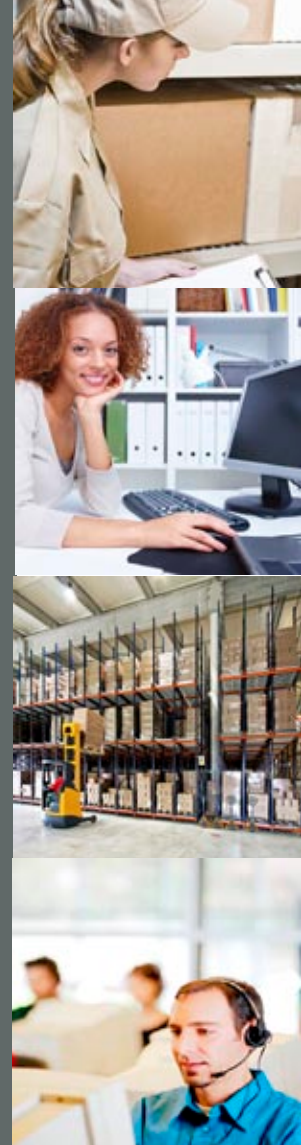

By analyzing orders, minimum stock requirements, current supply, quantities on purchase order, and optional MRP projections. Purchase Agent creates a to-do list of the materials that need to be purchased.

The list is presented in an easy-to-read graphical table format ready for your buyer to review, edit, and act upon. Purchase Agent will even generate Purchase Orders with the click of a button.

Key Benefits:

- Optimize cash flow by ordering only what is needed to satisfy sales orders.
- Avoid material shortages that result in missed promise dates.
- Eliminate expedite fees by ordering what is needed at the right time.
- Consolidate items and orders to maximize purchasing power.
- Automatically generate purchase orders with accurate costing.
- Retain full control through flexible options that fit your unique business operations.
- Drive efficiency by viewing all pertinent data from a single, actionable location.
- Streamline purchasing process while reducing inventory carrying costs.

Features

Create Your Demand Fence

You tell Purchase Agent how far into the future to review demand, plus which items, warehouse, customers, etc. should be analyzed, thereby creating your demand fence.

Account For Vendor Lead Times

Long vendor lead times may require some items outside of your fence to be considered.

Works With MRP

When used with the MRP module, items with manually entered quantity projections from the MRP module are considered in the quantity calculations.

Interactive Worksheet Grid

Intuitive spreadsheet-style grid speeds navigation and provides an easy-to-digest graphical interpretation of demand.

Drill Down For The Details

Pick an item and drill down to see a detailed listing of its reorder point and demand points. Even select specific demand points to exclude from consideration.

Dynamic Data Interaction

Direct connection to the database from the work grid allows the user to select or change vendors and order quantities. Filter the view for items requiring action or items requiring no action, and by vendor, planner, product line, sales order, customer, and more.

You Retain Control

Purchase Agent can be run to calculate requirements for all inventory items, a range of inventory items, discreet product lines, discreet warehouses, and parts assigned only to certain buyers. Any item can be put on hold or removed from the grid completely. The user can override the cost and quantity-to-buy for ultimate purchase control.

Flexible Purchase Order Creation

Select individual items or groups of items for order generation. Purchase Agent then adds these items to existing purchase orders, or an entirely new order. The item drops off of the grid to prevent duplication. The entire work grid can be cleared and quickly regenerated at any time.

From the Team That Brings You JobOps

Purchase Agent by JobOps makes an ideal companion product for users of Sage MAS 90 or MAS 200 ERP. Purchase Agent adds power and functionality for every company that tracks inventory and requires an efficient purchasing tool.
